

G DATA

# Managed Endpoint Security

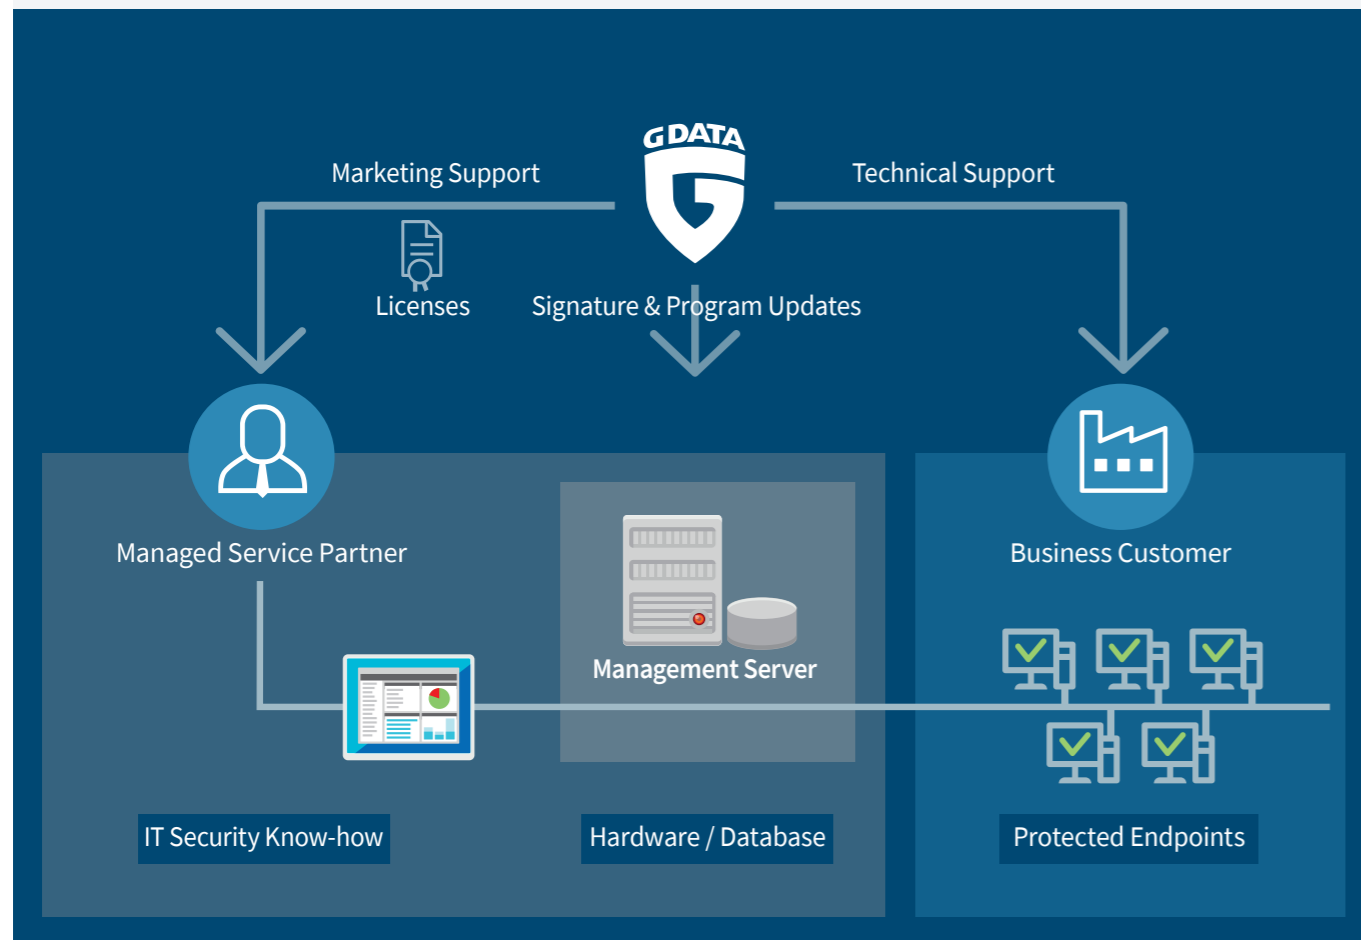

Our best protection for business customers combined with the convenience of Managed Services

Managed Endpoint Security enables our customers to focus on their core business and leave their IT Security to the G DATA experts. Cost efficient and without downtime due to administrative tasks. The G DATA Partner takes care of all arising tasks – from the deployment of the security solution, the configuration of the firewall to the integration with the Active Directory. He is also the personal point of contact for the

customer regarding licensing and provides professional help in case of emergency. The endpoints of every customer are connected to a separate Management Server which centrally monitors the security status of the network and deploys signature and program updates to the endpoints. The G DATA partner maintains the server in his datacenter and connects it to the endpoints via the internet.

With Managed Endpoints Security, our customers don't have to worry about hardware expenses, availability and maintenance.
